

Lightning Out: use your Salesforce Components across the web

X

Agenda

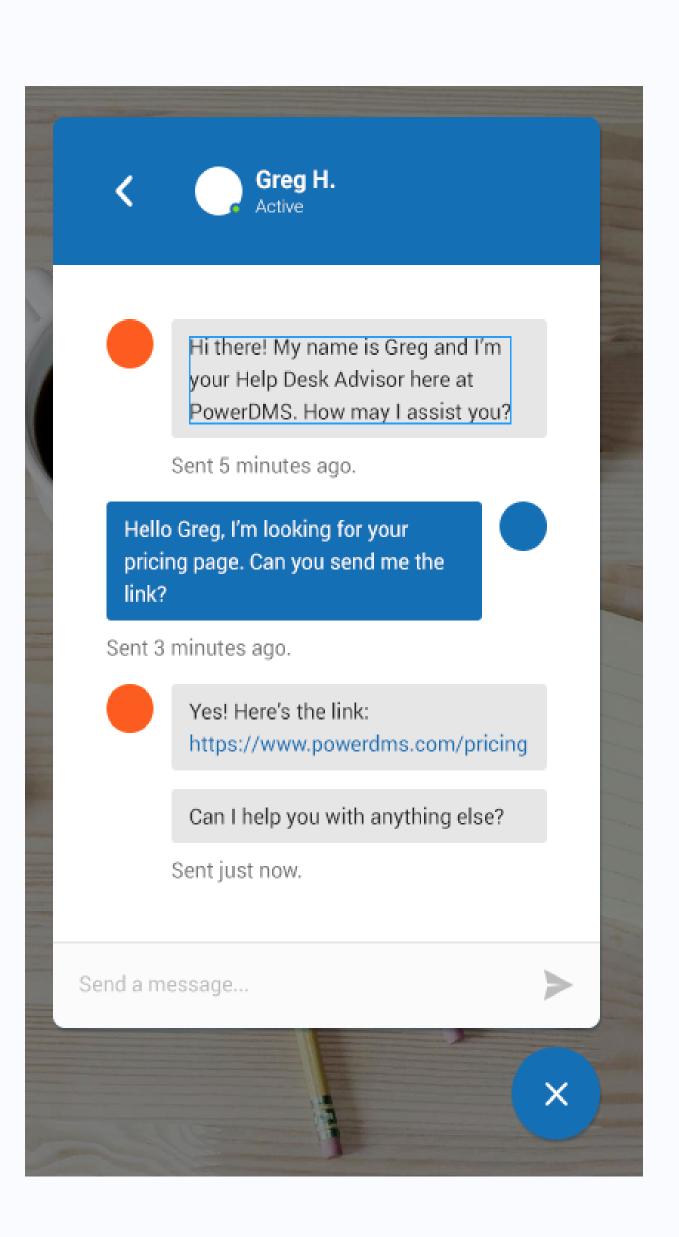

Creating an app using
Lightning Out is much like
creating any app with
Lightning components

Lightning Out — это технология
которая позволяет использовать
Aura & Lightning Web Components
вне Salesforce платформы.

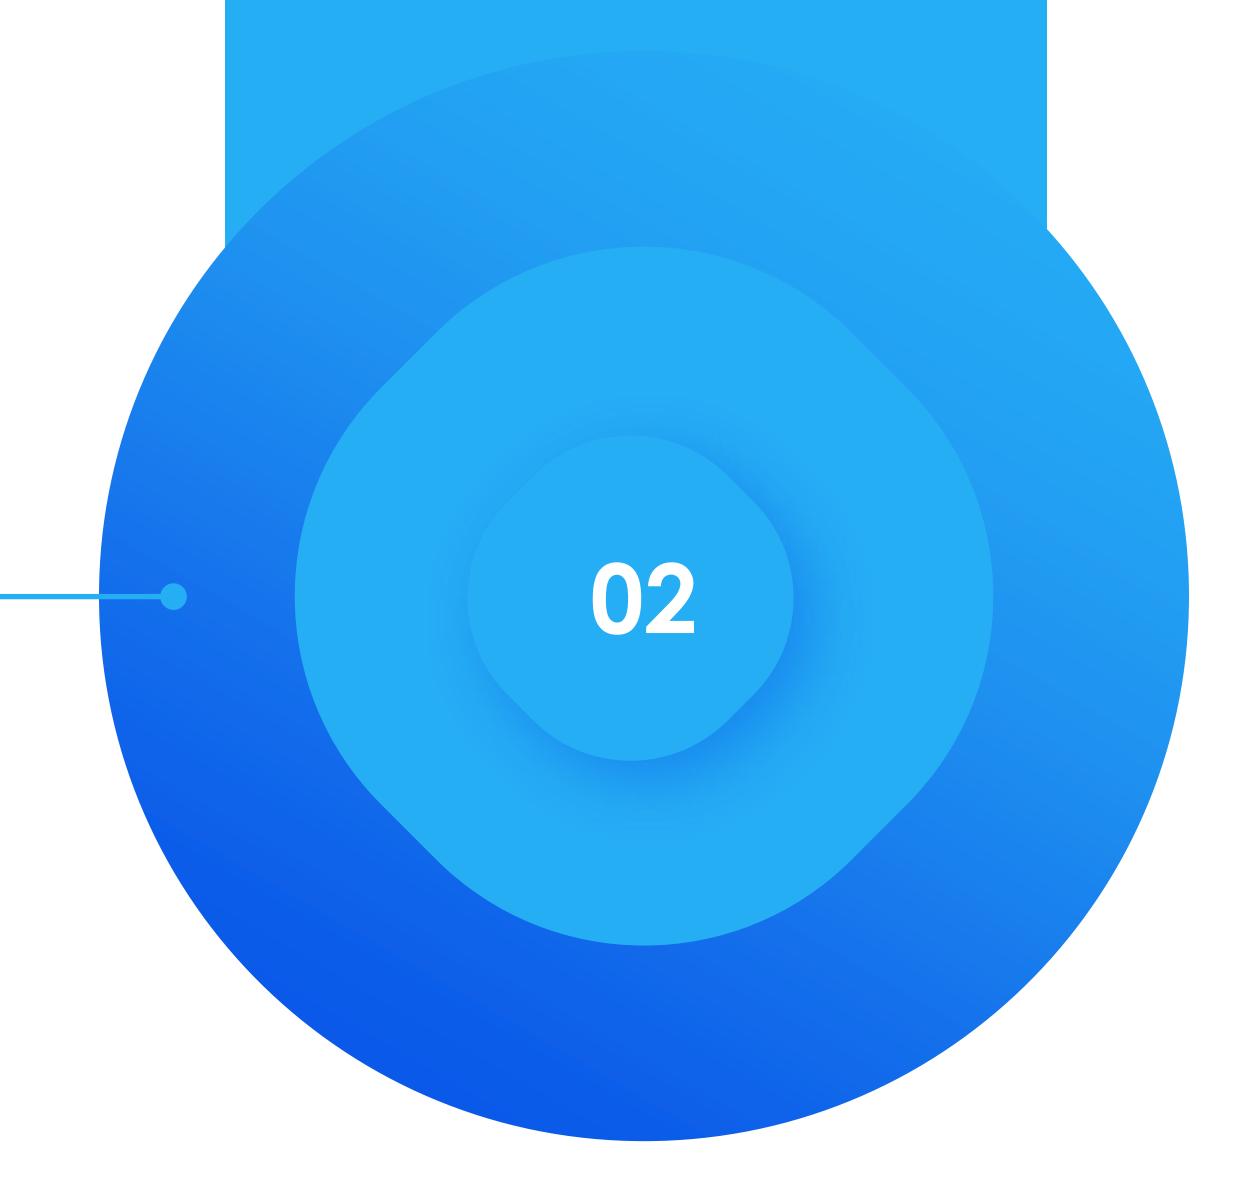

Kak caми Salesforce используют Lightning Out?

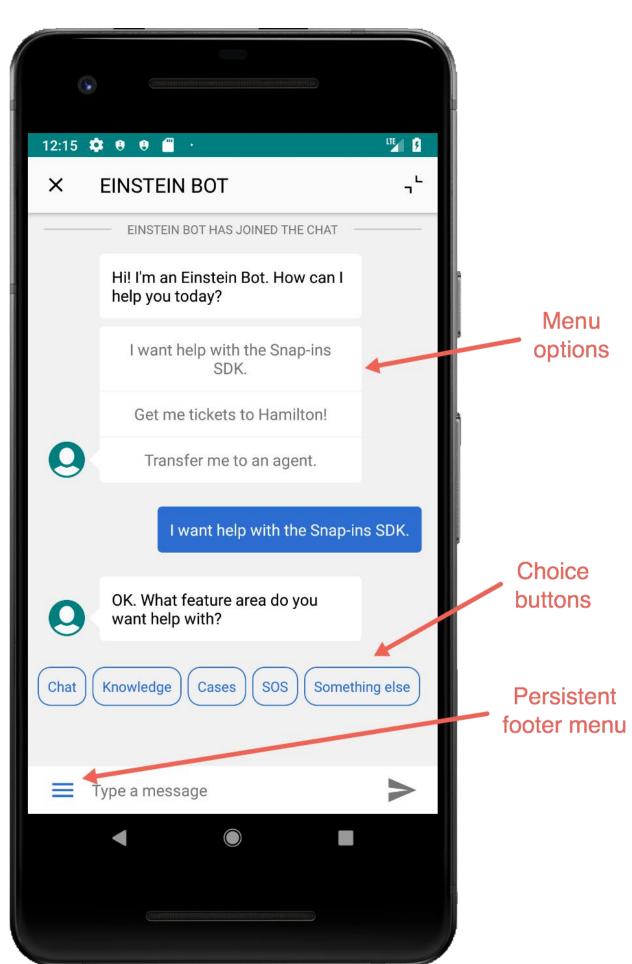

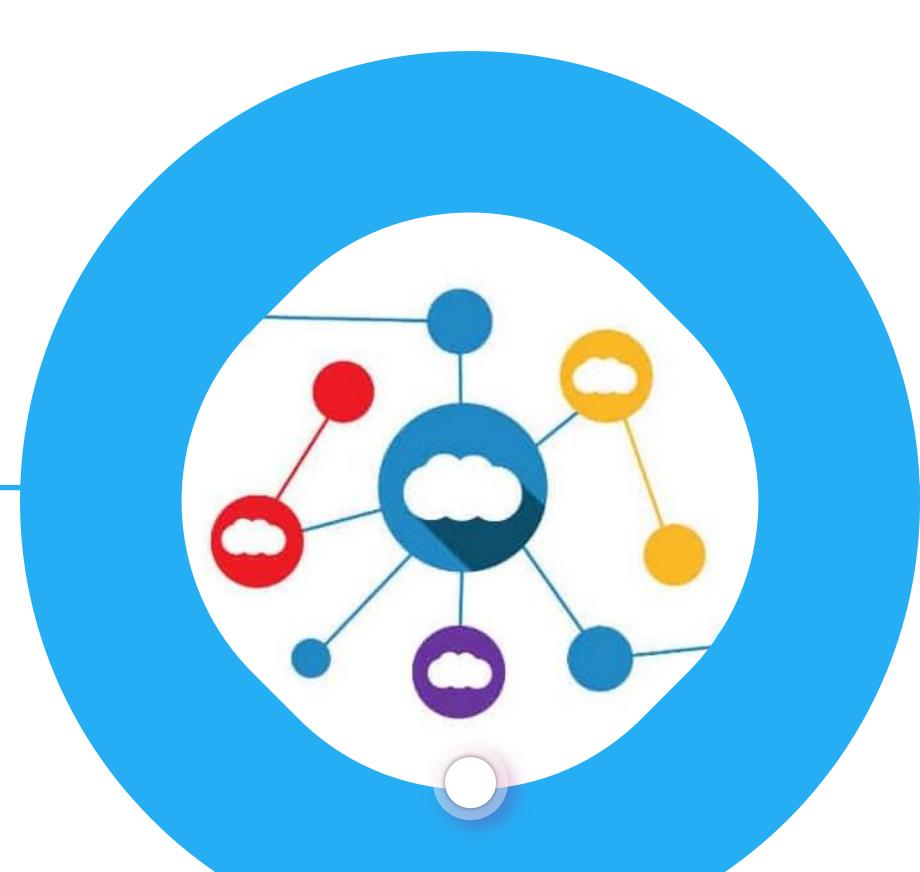

Live Agent Chat

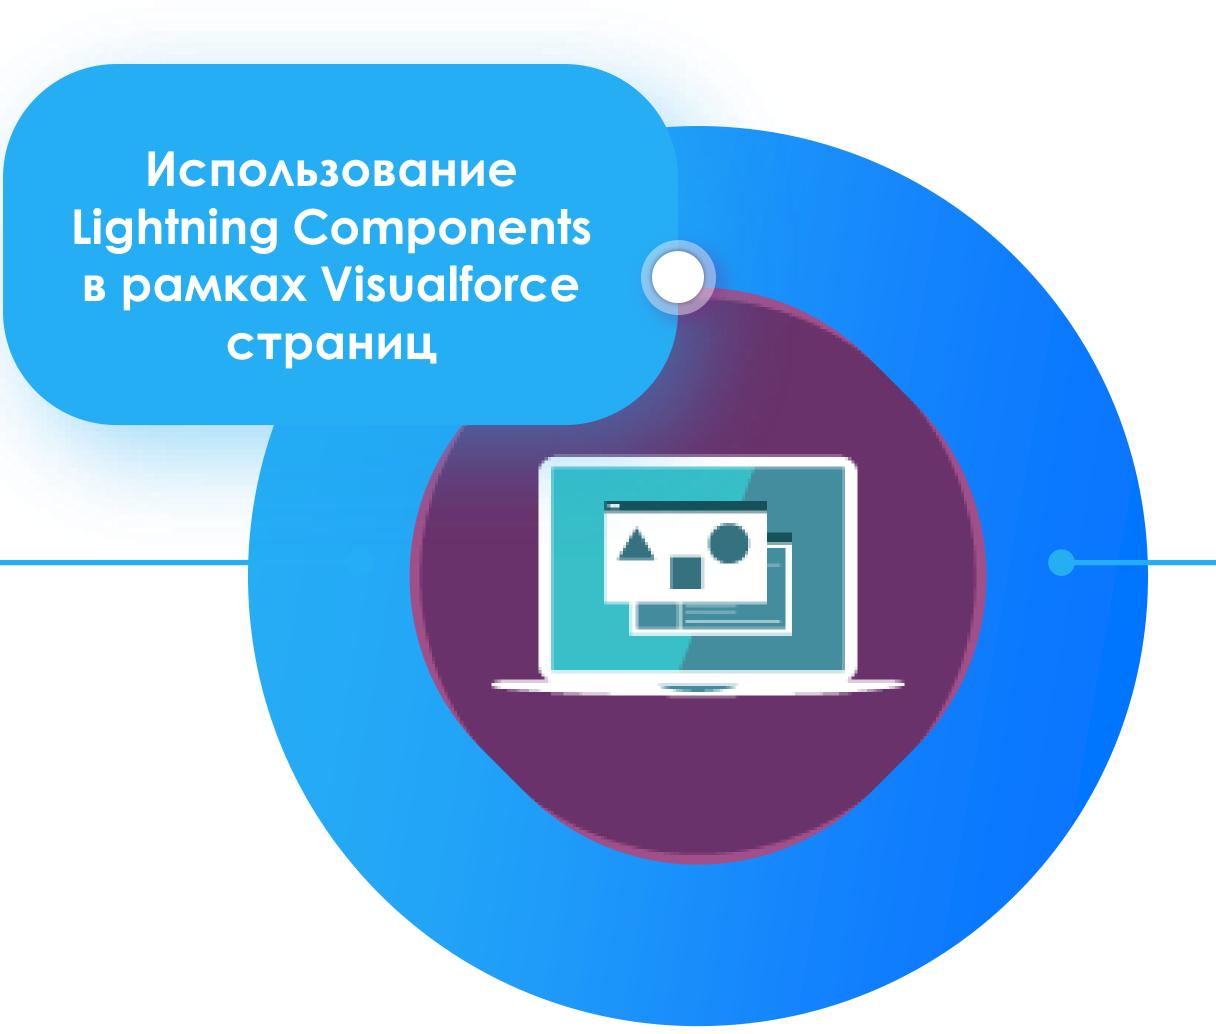

Как мы можем использовать Lightning Out?

Размещение компонент на любом ресурсе сохраняя при этом всю бизнес-логику которая используется в рамках Salesforce

Considerations -

Performance

Компоненты вне платформы не могут использовать многие возможности кэширования, соответственно могут работать немного медленнее

Browser Third-Party Cookies

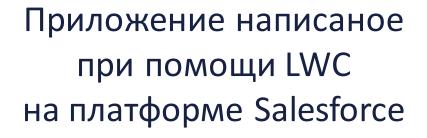

Поскольку комопненты запускаются внеплатфомы, "куки" буду являтся сторонними и пользователю необходимо будет разрешить их использование в своём браузере.

Поддерживаются все браузеры поддерживаемые Salesforce Classic

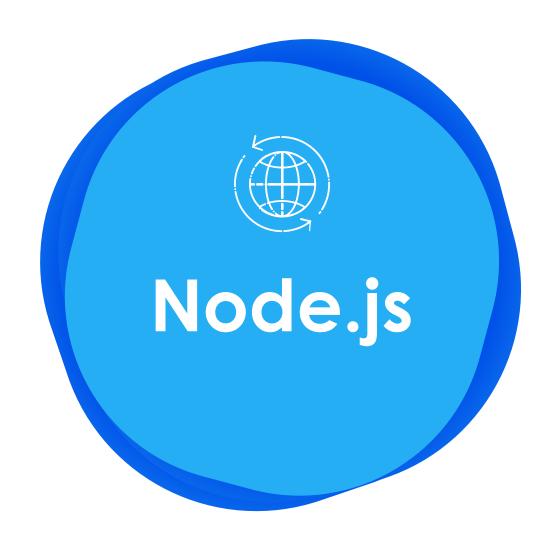

Heroku Application которое будет использоваться как платформа для нашего "remote web container"

Пишем простой RESTful сервис для авторизации, а так же для работы нашего веб-приложения на платформе Heroku

Node.js

```
₃ app.js ×
                                                                                                  ზე ↔ ⊹ ⊹ № 🛚
